QUOTATION

E-commerce Website for Chique Bags

Ref: CB/QT/2026/001
Date: 10 November 2026

Prepared for	Priyanka Vora, Proprietor, Chique Bags
Prepared by	Priyank Bohra, Developer
Subject	Design and development of a custom e-commerce website with an administration panel
Quoted price	**₹10,000** (Rupees Ten Thousand only), payable as set out in Section 5

1. Introduction

Further to our discussions, the Developer is pleased to submit this quotation for the design, development and launch of the official online store of Chique Bags. The store will give the brand a home of its own beyond Instagram, allowing customers to browse the collection, place orders and pay online, while the Proprietor manages the catalogue, orders and customers independently through a private administration panel.

Section 2 defines the scope of work. Sections 3 to 8 set out the technology, commercial terms, support arrangements, responsibilities, exclusions and general conditions that apply to it.

2. Scope of work

2.1 Customer website

The website will be designed mobile-first and will follow the brand's pink, cream and gold palette, with large photography, refined serif typography and generous spacing in the manner of a boutique fashion label.

Area	Deliverable
Homepage	Full-width banner slider of two to three banners (for instance new collection, gifting and bestsellers), each with its own photograph, headline, text and buttons, with automatic sliding and swipe support on phones. Further sections: shop by style, bestsellers, new arrivals, brand story, gifting, a newsletter sign-up and a footer that shows the brand's bestselling bags as an Instagram-style strip linking to its Instagram profile, together with contact and policy links. Product sections update automatically as the catalogue changes.
Navigation	Announcement bar, sticky header with a Shop menu, search with live suggestions, favourites, account and bag, and a bottom navigation bar on phones.

Catalogue	Shop page with category and price filters, in-stock filter, sorting and pagination, with shareable links. Product cards show sale, new, bestseller and sold-out tags, colour swatches, MRP, sale price and percentage saved.
Product page	Photo gallery, colour selection with stock tracked per colour, low-stock notice, quantity selection, add to bag, buy now, description, details and care information, related products, and customer reviews with star ratings (open only to customers whose order has been delivered).
Favourites	Heart button on every product. Favourites are kept on the device for visitors and saved to the account for logged-in customers, being merged on login.
Gifting	A dedicated Gifting page and homepage section featuring a photograph of the Chique Bags gift box. At checkout, a gift box and a handwritten note (up to 200 characters) may be added to any purchase for an additional ₹200.
Bag and checkout	Slide-out bag and a full bag page. Checkout with a live order summary (total at MRP, discount, shipping, gift box and final total) and saved addresses. Customers may check out as a guest, verified by a one-time email code, or from a logged-in account. Orders are prepaid only, paid through Razorpay (UPI, cards, net banking, wallets), and shipping is free on every order. If a price changes during checkout, the customer is shown the new total before paying.
Customer account	Sign-up with email verification, login, password reset by email code, profile and saved addresses. Order history with a progress tracker, courier tracking link, invoice download and cancellation of orders that have not shipped. A public Track Order page accepts an order number and email address.
Information pages	About, Contact (with a form), Shipping and Delivery, Returns and Exchange, Terms and Conditions, and Privacy Policy, including the business details required for payment-gateway approval.

2.2 Administration panel

A private, separately authenticated panel through which the Proprietor operates the store.

Module	Deliverable
Dashboard	Total revenue, orders, customers and live products; seven-day sales chart; latest orders; colours running low on stock; and alerts for orders that need attention.
Products	Add, edit, hide and delete products, with descriptions, highlights, material, dimensions and care notes; MRP and sale price with automatic discount; colours with individual stock; photograph upload to cloud storage with a cover photo; and New, Bestseller and Featured flags.

Orders	Search and filter orders; view items, customer, address and payment; move an order through confirmed, packing, shipped and delivered; record courier and tracking link; cancel an order; and print an invoice. Gift orders are flagged with the note to be written.
Customers	Searchable list showing contact details, number of orders, total spent and date joined.
Categories	Create, edit and order the categories shown in the shop.

2.3 Orders, payments and stock

1. The server recalculates every price, discount, shipping and gift charge from the database; figures sent by the browser are never relied upon.
2. For online payment, the server creates the order with Razorpay and verifies Razorpay's signature on completion. A webhook also confirms the order if the customer's connection is lost after payment, and duplicate notifications are processed once only.
3. Stock is reduced when an order is confirmed and can never fall below zero. Where two customers pay for the last piece simultaneously, the second order is flagged to the Proprietor for resolution.
4. Cancelling an order restores its stock and refunds an online payment through Razorpay.

2.4 Automated emails

The following emails are sent without manual action: verification codes (sign-up, guest checkout, password reset); welcome; order confirmation itemising prices, discounts, shipping, gift box and total; order shipped, with a tracking link; order delivered; order cancelled, with refund information; new-order alerts and contact-form messages to the Proprietor; and an acknowledgement to the customer for each contact message.

2.5 Security, search visibility and accessibility

Aspect	Provision
Access control	Separate customer and administrator sessions in encrypted, HTTP-only cookies. Every administration page and data route is blocked on the server for anyone not signed in as administrator. Customers can view only their own orders and invoices.
Data protection	Passwords stored only as bcrypt hashes. Verification codes expire after ten minutes and lock after repeated failures. Rate limiting on login, sign-up, codes, checkout, contact and tracking. All input validated on the server, database queries parameterised and user-supplied text escaped. Secure browser headers, including HTTPS enforcement. Keys and passwords held in protected server settings.
Search visibility	Individual page titles and descriptions, link previews for WhatsApp, Instagram and Facebook, structured product data for search results, readable web addresses, sitemap and robots files, and server-rendered pages.

Performance and accessibility	Automatic image resizing in modern formats, keyboard-friendly navigation, labelled controls and respect for the visitor's reduced-motion setting.

2.6 Additional features

The following features were requested after the original scope was agreed. They are charged separately, as itemised in Section 5.

Feature	Deliverable
WhatsApp integration	A floating WhatsApp chat button on every page, and an enquiry button on each product page that opens a WhatsApp chat pre-filled with the bag's name, price and link.
Pincode validation	The delivery pincode is checked at checkout and on saved addresses against India Post records, with the city and state filled in automatically. An invalid pincode cannot be ordered.
Returns and refunds	A customer may report a damaged, defective or wrong item within seven days of delivery, with photographs, from the order page. A Returns section in the administration panel tracks each request through requested, approved, item received and refunded (or rejected). A refund is issued through Razorpay, for the full or a partial amount, and its amount, reference, date, reason and the staff member responsible are recorded on both the request and the order. The Proprietor may also record a return or refund on a customer's behalf. Customers are emailed at each step.
GST invoices and order management	Tax invoices numbered per financial year, showing the seller's GSTIN and HSN code, taxable value, CGST and SGST (or IGST for other states), and the amount in words. The Proprietor can edit an order's contact and delivery details and keep private notes on it from the administration panel.
Initial product upload	The Developer enters the initial products, with prices, colours, stock and photographs, from the content supplied by the Client.
Extended support	Complimentary post-launch support for thirty (30) days instead of the standard two weeks (Section 6).

3. Technology and third-party services

The website is a custom build rather than a template, using the following technologies and services.

Component	Technology
Website	Next.js, React and TypeScript, styled with Tailwind CSS
Database	PostgreSQL on Neon, accessed through Prisma

Payments	Razorpay (prepaid orders)
Photographs	Cloudinary
Email	SMTP email service
Hosting	Vercel, with a custom domain

These services are to be held in accounts owned by the Client. Their subscription fees, the domain registration fee and Razorpay's transaction charges are payable by the Client directly and do not form part of the quoted price.

3.1 Database backups and recovery

The database is hosted on Neon, a managed PostgreSQL service that keeps a continuous history of changes and can restore the database to an earlier point in time. The length of that history depends on the Neon plan chosen by the Client. The Developer will document the recovery procedure and can export an independent copy of the database on request. Photographs are stored on Cloudinary and the source code on GitHub, from which the website can be redeployed at any time.

4. Delivery of content

The website will be delivered with sample products and stock photographs so that the design may be reviewed. The Client's own product, banner and gift box photographs, product details and prices are to replace them before launch. Products, prices, stock and photographs may thereafter be updated at any time through the administration panel.

5. Price and payment schedule

The total price for the scope defined in Section 2 is **₹10,000** (Rupees Ten Thousand only), payable in three instalments.

Instalment	Payable	Amount
1. Advance	On acceptance of this quotation, before work begins	₹2,000
2. UI confirmation	On the Client's approval of the design and layout of the website	₹3,000
3. Go-live	On the website being made live on the Client's domain	₹5,000
Total		**₹10,000**

Additional features

Feature (Section 2.6)	Amount
WhatsApp integration	₹1,000
Pincode validation	₹1,000

Returns and refunds	₹4,000
GST invoices and order management	₹2,000
Extended support (30 days)	₹1,000
Initial product upload	₹100 per product
Total for additional features (excluding product upload)	**₹9,000**

Additional features are payable together with the go-live instalment. Product upload is charged at the number of products actually entered.

6. Support and maintenance

Support is provided complimentary for the first thirty (30) days after go-live. Thereafter, maintenance is available at the Client's option at **₹2,000 per month**. It is optional, is charged only if the Client elects to continue, and may be discontinued at any time by notice to the Developer.

Covered	Not covered
• Technical assistance with deployment of the website. • Investigation and correction of website failure. • Correction of bugs and faults in any feature described in this quotation.	• New features or sections, which are quoted and charged separately before work begins. • Faults caused by third-party services being unavailable or changing their terms.

7. Client responsibilities and exclusions

7.1 The Client shall provide

- Product photographs, descriptions, prices and stock details, and the business details required for policy pages and invoices.
- Accounts for Razorpay (with KYC completed), Cloudinary, Vercel, Neon and an email service, together with a domain name.
- The business details needed for invoices (legal name, GSTIN, address and state) and the WhatsApp number to be used.
- Feedback and approvals in good time, in particular the UI confirmation on which the second instalment depends.
- Payment of each instalment on the dates in Section 5.

7.2 Not included

- Live courier integration (for example Shiprocket). Shipping is handled by recording the courier and tracking link in the administration panel, which notifies the customer; integration may be added later as a separate item.

- Product photography, videography and content writing.
- Marketing, advertising and paid search-engine services.
- A mobile application, and bulk product upload from spreadsheets.
- The third-party fees referred to in Section 3.

8. General terms

1. All amounts are stated in Indian Rupees (₹).
2. Any work beyond the scope in Section 2 constitutes a change of scope and will be quoted separately and agreed in writing before it begins.
3. The source code and all service accounts will be handed over to the Client on receipt of the final instalment.

9. Acceptance

By signing below, the Client accepts this quotation, the payment schedule and the terms stated above.
